THE PROBLEM Problem alignment & impact

Millions learn from explainer videos.
Making a correct one still takes a studio.

01 **Too slow and costly**

A good minute of video takes days: script, research, animation, narration, editing. Most teachers and NGOs cannot afford it.

02 **AI video gets the facts wrong**

Text-to-video tools invent coastlines, garble numbers and fake equations. In a lesson, a wrong number is worse than none.

03 **Stuck in one language**

Most explainers exist only in English. A Hindi, Nepali or Bahasa version means starting again.

WHERE IT MATTERS

Education
Lessons, revision Shorts, science and math

Public information
Health, policy and crises, explained by NGOs

News
Stories with real maps and real numbers

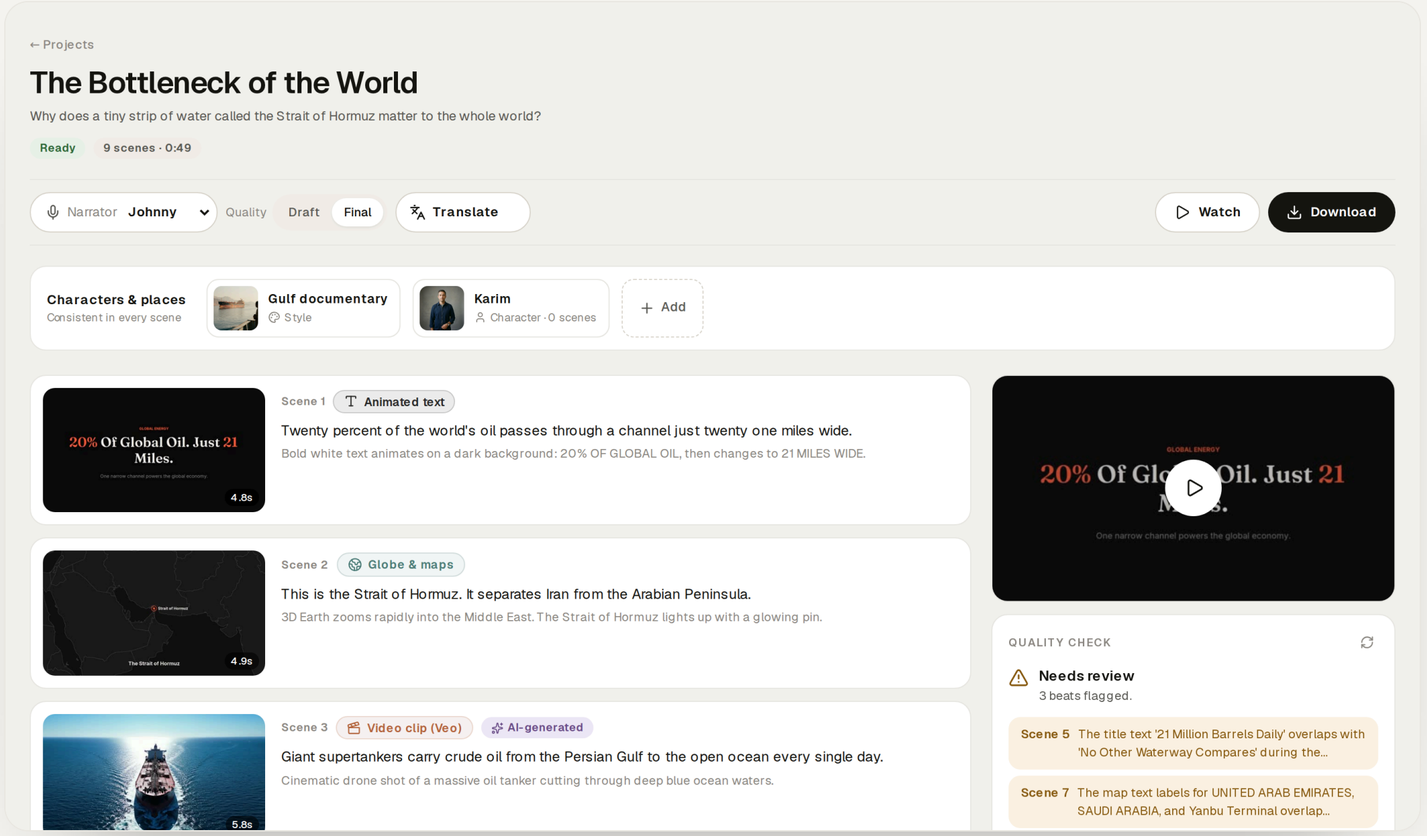

Creators
Explainer channels, long-form and Shorts

The result: people learn from videos that are **late, wrong, or not in their language.**

THE SOLUTION

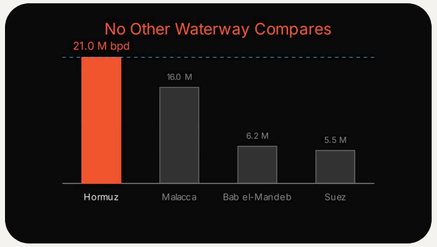

From a question to a finished video.

- ✓ Ask a question or upload notes
- ✓ Approve the storyboard
- ✓ Render: narrated, checked
- ✓ Change any scene in plain words
- ✓ Download, or translate in one click

THE CORE IDEA Innovation & creativity

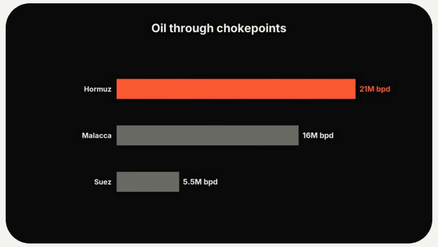

The right picture for every scene.

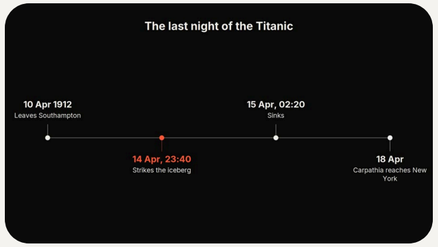

Math animation

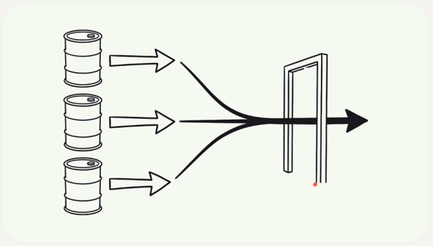

Real maps

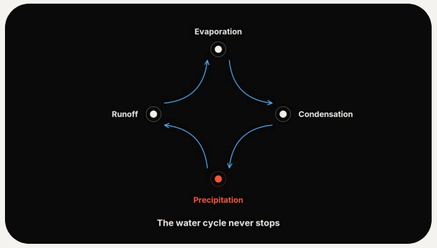

Data chart

Timeline

Whiteboard

Flow diagram

Animated text

Cinematic shot AI

Presenter AI

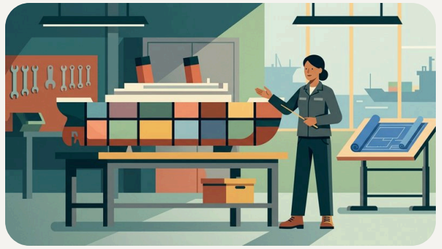

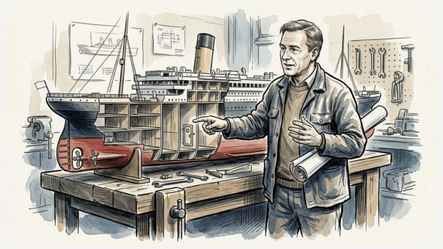

Veo clip AI

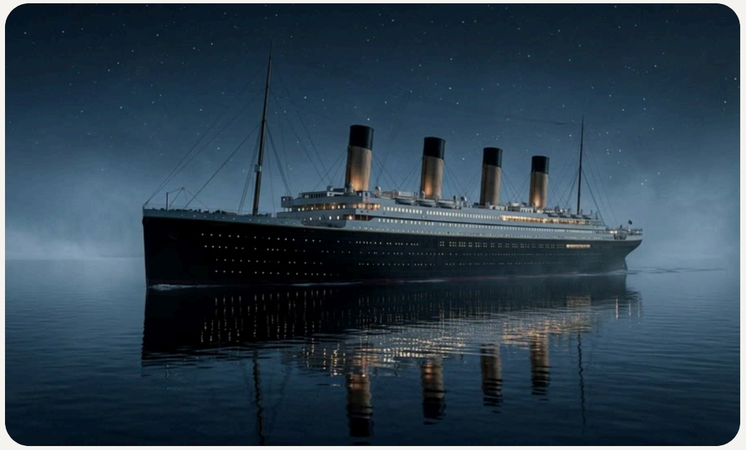

Facts are drawn from data and code. AI pictures only where they help, and always labelled.

STYLE AND CONSISTENCY Creativity

Ten looks. The same ship in every shot.

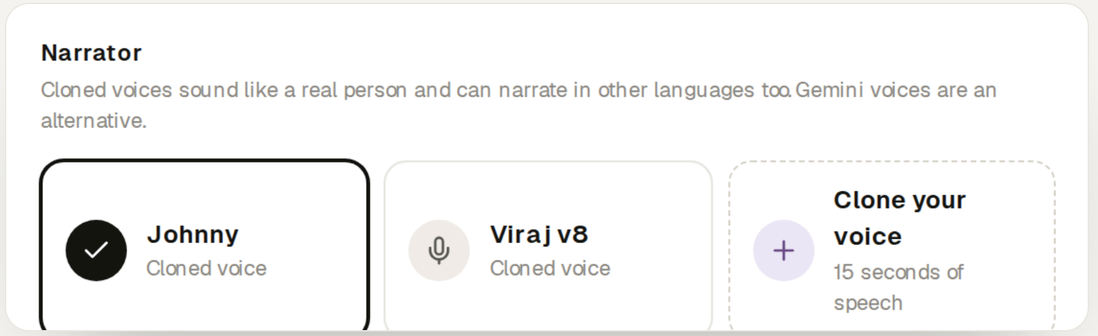

VOICE CLONING Innovation

Narrated in your own voice.

- ✓ 15 seconds of speech, cloned once
- ✓ Same voice in English and Hindi
- ✓ Consent required
- ✓ Runs on a Cloud Run GPU, off when idle

Each model does one job well.

Writes and plans the video	Gemini 3.1 Pro
Writes animation code, fills charts and maps	Gemini 3.5 Flash
Pictures and characters	Nano Banana
Hero video clips	Veo 3.1
Narration · music	Gemini TTS · Lyria 3
Reviews frames, checks facts	Gemini + Google Search grounding

TRUST Technical merit · responsible AI

Every video checks itself.

Fact check
Sources + Google Search, with links

Quality check
Gemini reviews every scene

Invisible watermark
Anyone can verify a copy

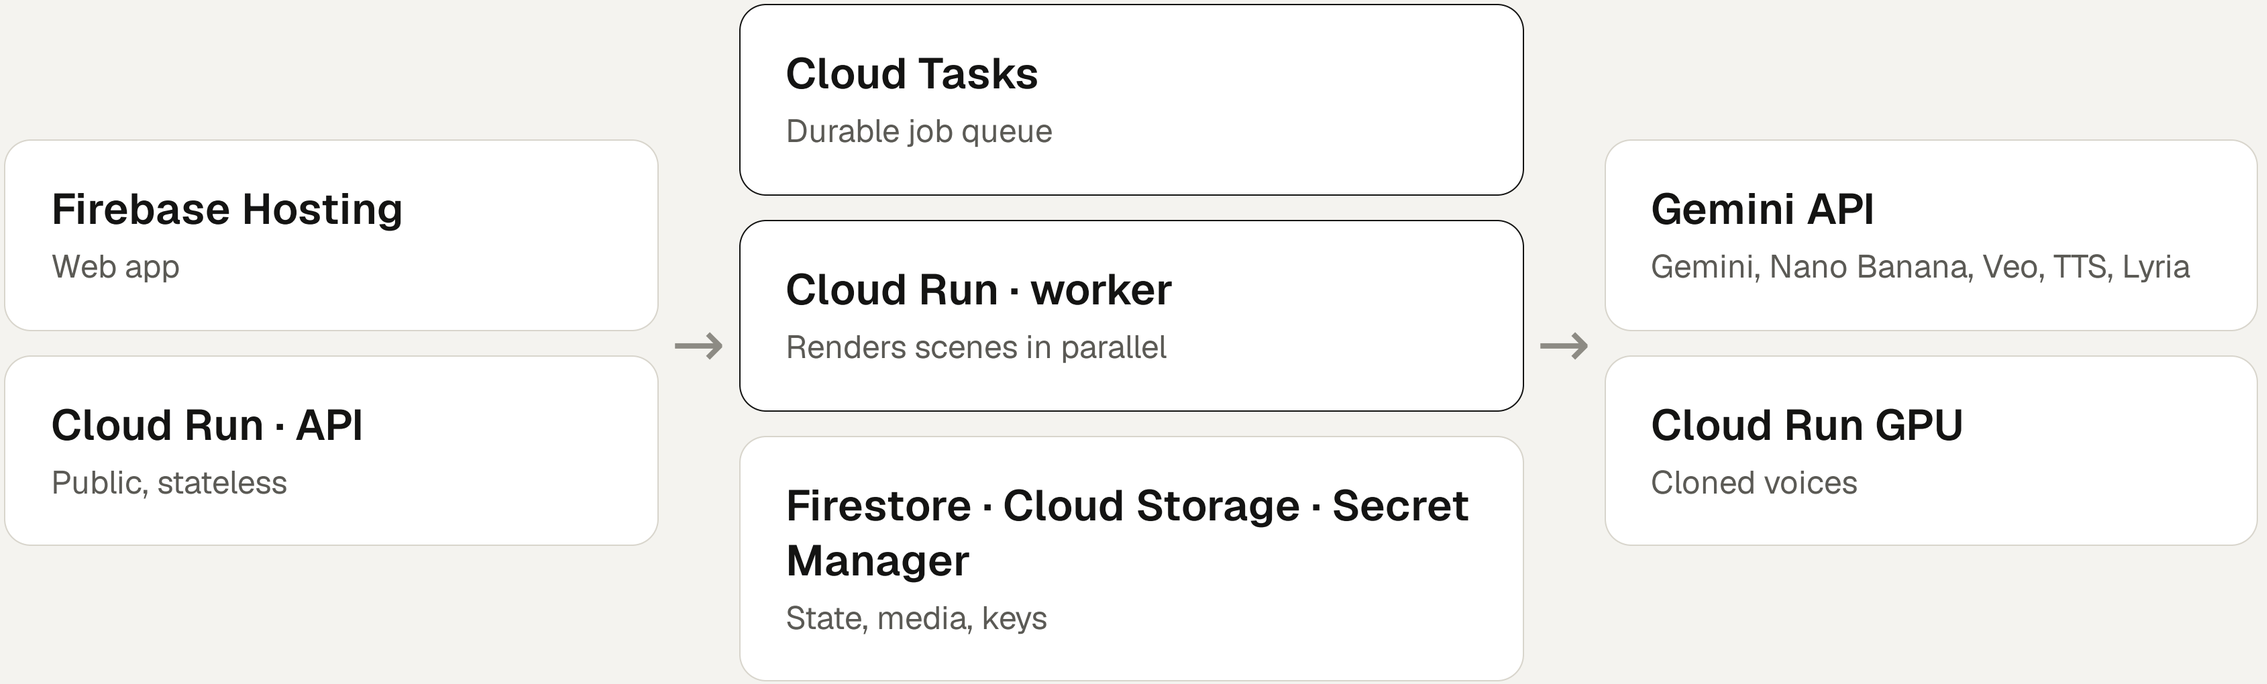

No deepfakes
Real people are never faked

Spending caps
$5 a video, $25 a day

Never a broken video
Failed scenes fall back safely

GOOGLE CLOUD Technical merit · scalability

Runs on Cloud Run. Scales to zero.

RESULTS

Measured on the prototype.

12
finished videos, 3 languages

62%
of scenes drawn from real data

4–9 min
to render a one-minute video

$0.80–2.80
per video in model costs

$0
compute when idle

126
automated tests

WHAT IS DIFFERENT Originality

Beautiful is easy. Correct is the product.

	AI VIDEO TOOLS	MITRAFIELD
Numbers and maps	Often wrong	**From real data**
Length	Seconds	**1 to 6 minutes, narrated**
Fix one moment	Start again	**Edit one scene**
Narrator	Stock voice	**Your own voice**
Languages	Start again	**One click**
Proof	None	**Fact check and watermark**

WHAT IS NEXT

Where it goes from here.

- ✓ Google Drive: import sources, save videos
- ✓ A fully flexible video editor
- ✓ Sign-in and private workspaces
- ✓ More languages and voices
- ✓ Publish straight to YouTube

Known limits: no accounts yet, a 20 to 45 second GPU start after idle, and fact checks reduce errors but cannot remove them all.
